

This is an app which can be used to calculate D/L method in case of rain/ interruptions for revised targets.

**Duckworth-Lewis Calculator by Tarams Inc for IOS:**

<https://itunes.apple.com/ca/app/duckworth-lewis-calculator/id525417125?mt=8>

**Duckworth-Lewis Calculator for Android:**

<https://play.google.com/store/apps/details?id=com.tarams.android.duckworthlewis>

Once the app is downloaded, Launch the App, go into Abouts and change the G50 Value to 200 in order to get the correct calculations.

Alternatively, you can always do the calculations manually using the following worksheet:

[DL-WorkSheet-2019.pdf \(tcuandsa.com\)](#)

[DL Resource Chart New.pdf \(tcuandsa.com\)](#)
